WE MAKE IT HAPPEN

## The Beauflor Way . . .

At Beauflor we believe that beautiful flooring is always at the heart of the home, that not only inspires the perfect balance of textures and tones but indeed brings your home to life.

Our design team have been researching the world's current trends, textures and styles to bring our 2020 collections together. So which ever style or pattern you choose works in harmony with the space around it.

With different performance levels within our ranges, we are safe in the knowledge that you have all the options of quality and durability with the perfect balance of contemporary or traditional colour palettes and styles to choose from.

Introducing our 2020 residential collections of stunning vinyl flooring with quality, durability and performance guaranteed.

# Ultra

The Ultra collections bring style, beauty and strength to your interior in any area you choose. Drawing inspiration from the world's colour patterns and trends, these collections have been thoughtfully crafted to make sure not only style and impact are what you are looking for, but extra durability is needed and guaranteed for years to come.

**Usage Classification 32 +**

# Optima

The Optima collections feature stunning wood and stone designs with the highest attention to detail displaying a level of realism rarely seen. You will find a range of styles and tones to perfectly complement any room you desire, traditional or contemporary. Easy maintenance and strong durability come as standard.

**Usage Classification 23 - 31**

# Prima

Beautiful collections of wood and tile designs with authentic detailing, our Prima collections offers our widest selection of vinyl flooring, that match the character of rustic, traditional and natural hardwoods, or the detail of natural stone tiles which lends itself to a variety of interior looks and spaces, the choice is yours!

**Usage Classification 21 - 22**

Why Vinyl?

Atlas 649M - Nobletex

# Pure and Simple . . .

## UNROLL IT AND IT'S DONE

Laying our vinyl floors is child's play. Simply because this product has been designed to make your life easier. Supple, and available in a variety of widths (up to 5 metres), it can be cut with a utility knife. This practical characteristic is very much appreciated when you want to change the design of your home. It can be glued or loose laid. The extra benefit: whichever design you choose it will look awesome.

## LOW MAINTENANCE

Our cushion vinyl rolls are very low-maintenance. Thanks to an optional protective polyurethane lacquer, the floor is easy to clean and it is protected against daily wear and tear. All it needs is an occasional sweep with a wet mop and standard cleaning products.

## SEAMLESS

Beauflor is the only company in the world to offer cushion vinyl rolls in 5 metre width, allowing you to easily install your flooring without any joints to achieve the perfect finish your home deserves.

## COST SAVING

Cushion vinyl rolls are a budget-friendly flooring solution allowing you to create the stylish interior you deserve.

## SUPER SILENT FLOOR

Whether you are walking around in your high-heels or feel like having a lazy day in your slippers, our cushion vinyl absorbs noise so well that it is up to 50% more silent than comparable floors!

## 100% WATERPROOF

Looking for a floor that can stand up to wet and dirty shoes or paws? Or do your children sometimes turn your bathroom into a swimming pool? Then our 100% waterproof cushion vinyl rolls are just what you need.

## COMFORT & WARM TOUCH

Cushion vinyl floors are soft and warm to the touch, which makes them the ideal floor to walk on barefoot. Moreover, they conduct heat easily which means that they work well with underfloor heating.

## DURABILITY

Cushion vinyl floors are protected by a hard pvc wearlayer. The resistance of vinyl to staining and general domestic use is one of the key benefits of vinyl floors.

## ANY DESIGN YOU WANT, ANYWHERE IN YOUR HOME

In 2, 3, 4 and even 5-metre widths, our cushion vinyl roll is ideal to install in your bathroom, kitchen or any other room.

# BEAU FLOR®
we decorate your floor

Unique designs, colours and textures.
We are inspired by the world to bring your home to life . . .

The world is full of inspiration from nature, natural minerals, architecture, and seasonal colour changes that effect our environments. At Beauflor we wanted to transfer this into our collections giving us the freedom to create some striking designs that stand the test of time.

We believe the textures and colours we see around us can be translated in so many ways to make our homes such a welcoming place to be. We have been inspired and hope you will be too. . .

MADE IN EUROPE

Gambel Oak 791M - Ultratex

Falco 616M - Designer-Tex

Our European manufacturing process follows strict protocols designed to respect the environment. It takes into account the needs of the local economy as well as following best practice.

The components of our PVC meet the highest standards and comply with the European legislation concerning the use of chemicals (REACH).

By manufacturing in Europe we are closer to our markets, which means that our products have less miles to travel to reach the consumer. This helps us to control our carbon footprint and helps reduce the impact of climate change for future generations.

# THE ENVIRONMENT MATTERS TO US

**We meet and exceed the most stringent international regulations**

All our activities are based on a life cycle perspective, for the preservation of our environment. And we intend to continue like this - we see that as a necessity and a responsibility for climate change now and generations to come.

We, at Beauflor, have reached these very high standards through extensive research supported by important investments. We are very proud that our products now rank among the absolute safest and healthiest floorcoverings available in today's marketplace.

**RAW MATERIALS**

**PHTHALATE FREE PRODUCTION**

**TRANSPORT**
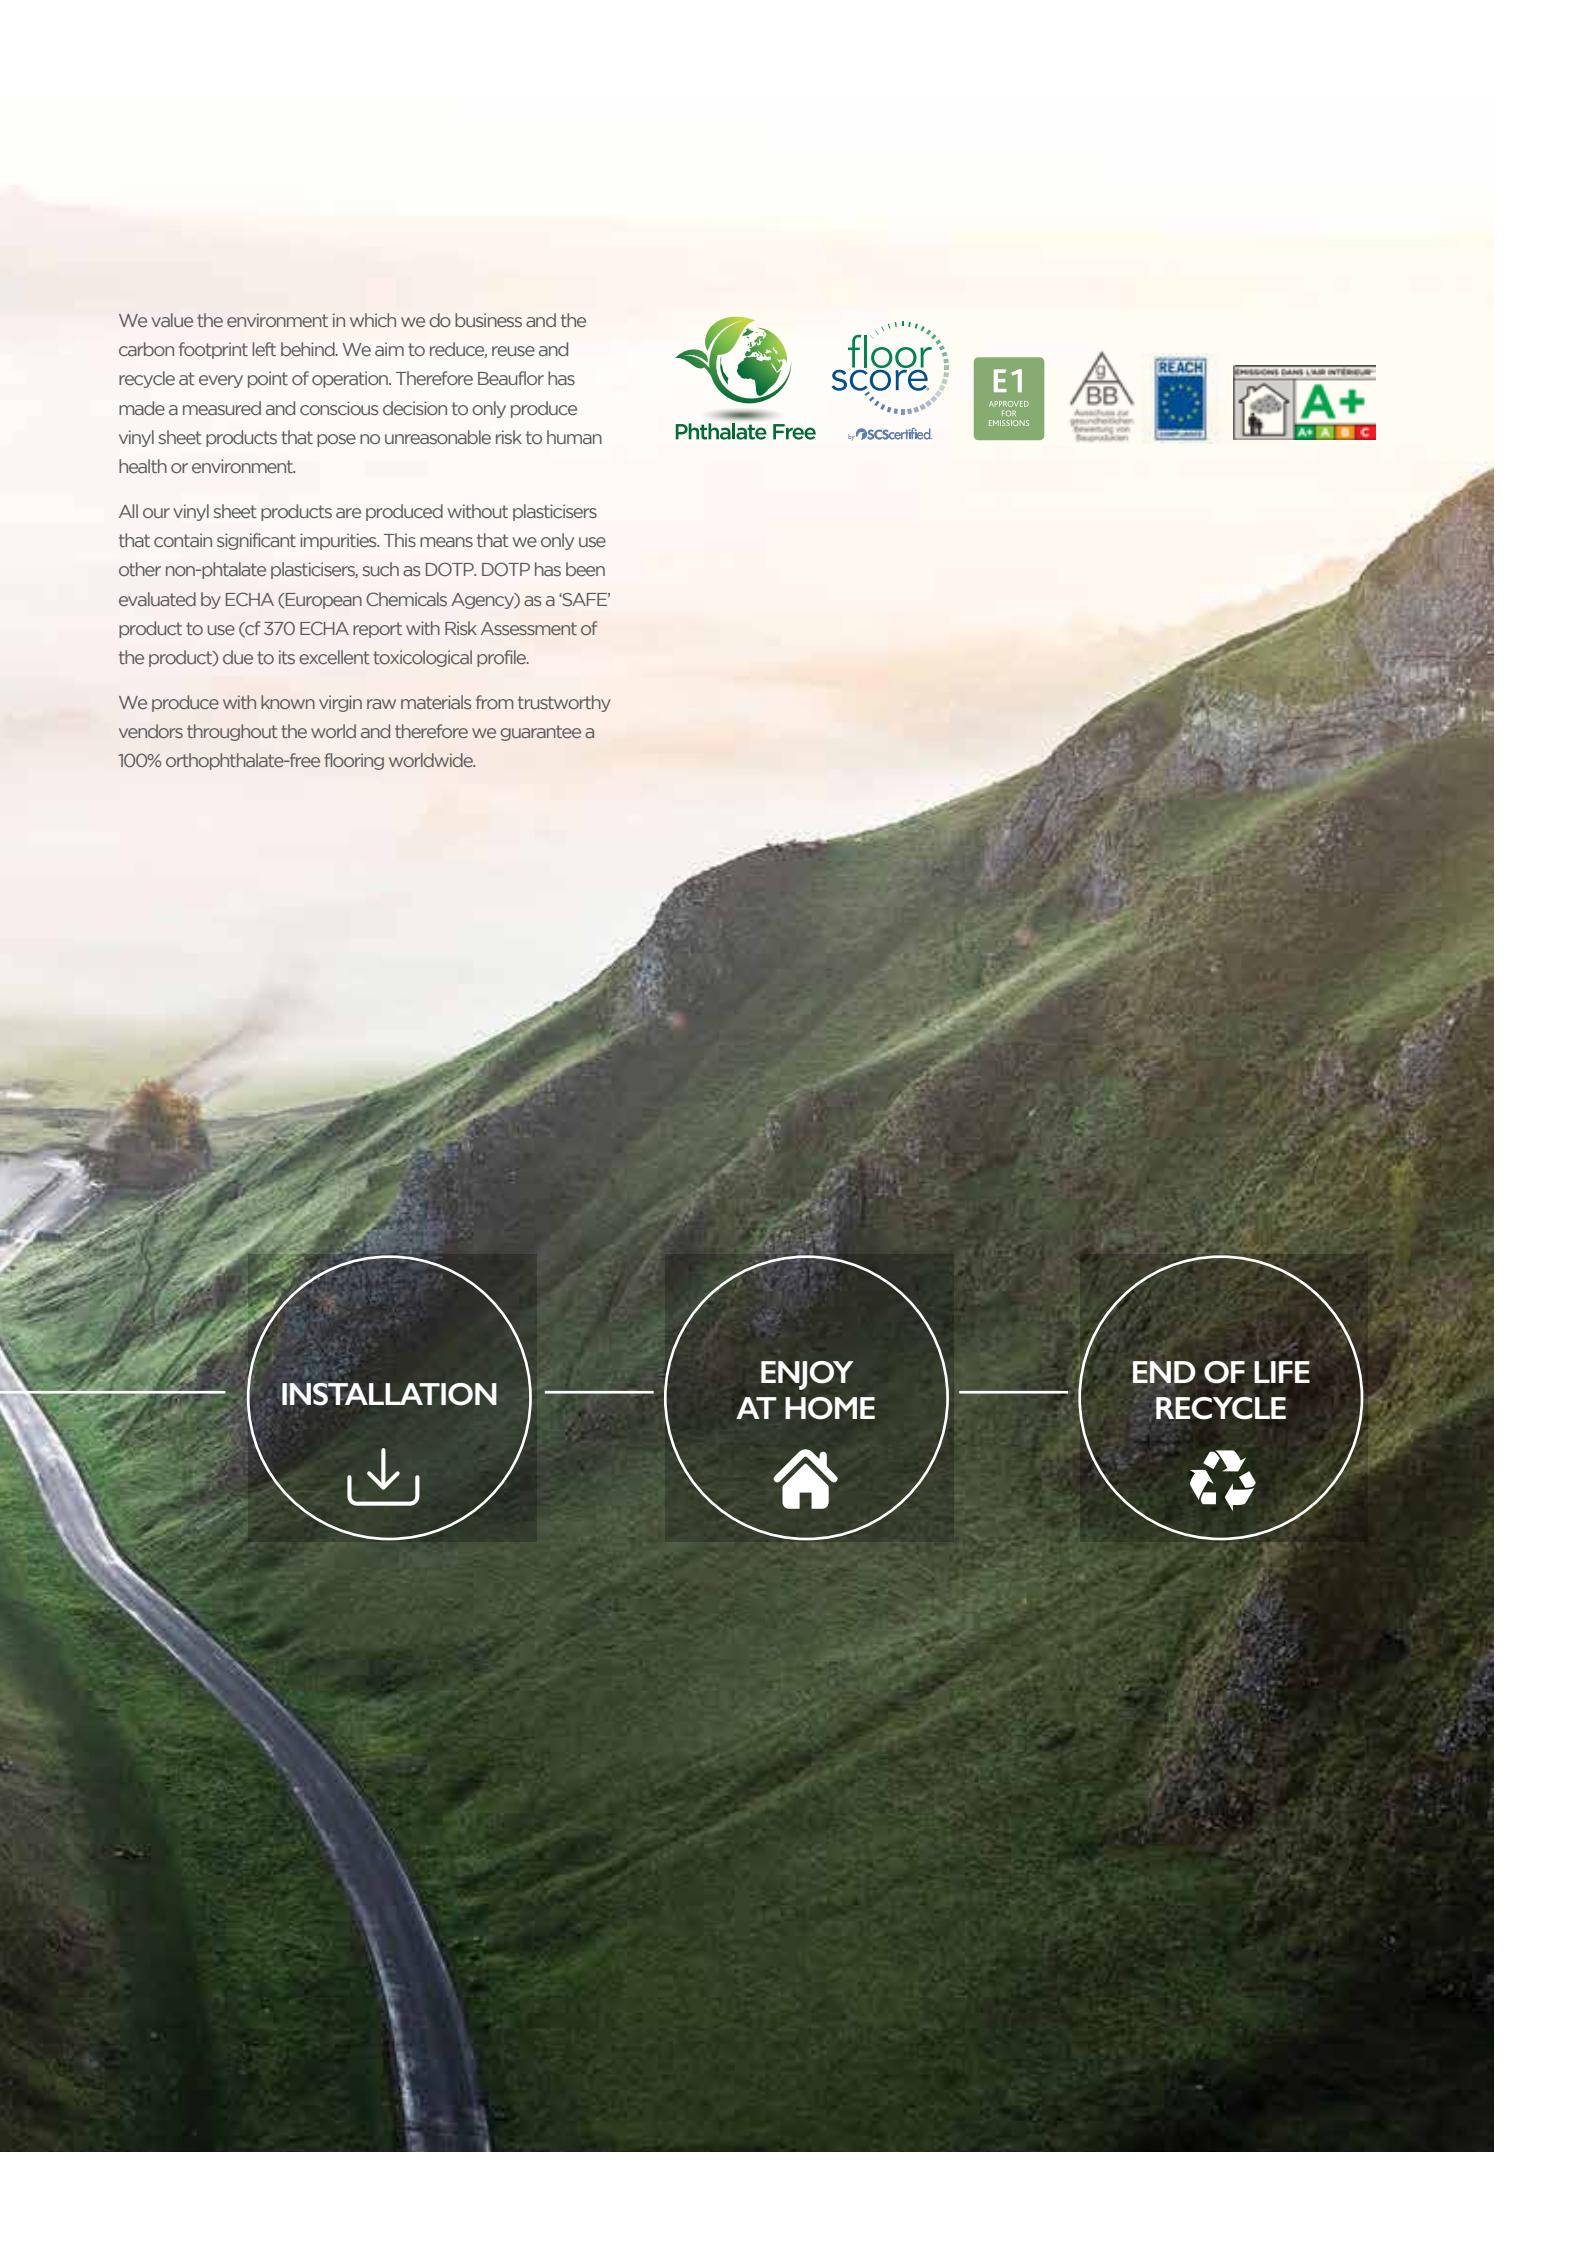

We value the environment in which we do business and the carbon footprint left behind. We aim to reduce, reuse and recycle at every point of operation. Therefore Beauflor has made a measured and conscious decision to only produce vinyl sheet products that pose no unreasonable risk to human health or environment.

All our vinyl sheet products are produced without plasticisers that contain significant impurities. This means that we only use other non-phtalate plasticisers, such as DOTP. DOTP has been evaluated by ECHA (European Chemicals Agency) as a 'SAFE' product to use (cf 370 ECHA report with Risk Assessment of the product) due to its excellent toxicological profile.

We produce with known virgin raw materials from trustworthy vendors throughout the world and therefore we guarantee a 100% orthophthalate-free flooring worldwide.

# 1. STORAGE & HANDLING

The information below is provided for anyone fitting a Beauflor cushion vinyl floor covering. Beauflor suggests that wherever possible the purchaser uses a professional installer in order to obtain the best results. Please read the complete instructions prior to fitting our vinyl floor covering. Failure to follow our instructions may affect your warranty so it is important to fully understand what is required before installation begins.

Cushion vinyl flooring is intended for interior use only. To select the most appropriate product in the Beauflor collection you should consider the amount of wear and tear it will receive in the area you are going to use it. Softer vinyl flooring is not suitable for areas which receive heavy foot traffic, like hallways, or where it is likely to be subject to heavy, focused, loads like those from casters or wheels.

Beauflor vinyl flooring must be stored indoors and protected from the weather. The storage area must be dry and free from direct sunlight with an ambient temperature between 0°C and 30°C. To avoid the vinyl flooring becoming yellow, ensure that the storage area is free of any contamination or pollution. Take care to avoid rough handling. If the material is pre-cut and then stored for some time, it must be rolled face out around a cardboard tube before installation, not piled-up or flattened under a heavy weight. Two metre wide rolls should be stored upright and securely fastened, rolls above two metres should be stored horizontally and not stacked.

## Visual inspection

Before installation, always check that the product is the one you ordered in terms of specification, design and colour. At the same time carefully inspect the material for any visible damages and defects. Although Beauflor rolls are inspected before leaving the factory, it can happen that defects are not detected. In such case, contact your Beauflor distributor for assistance.

Beauflor will not pay labour charges on claims filed for materials installed with obvious visible defects or damage caused by wrong transport, storage and/or handling.

## Acclimatisation

Beauflor floorings and adhesives must be kept for conditioning for 24 - 48 hours prior to installation, at a temperature of 18 - 29°C and a relative humidity of 50-60%. They should then be left for a further 24 – 48 hours, after fitting, before use.

It is recommended that the material is pre-cut (accurately) to fit the room 24 hours prior to installation. Roll the material face out again but be careful not to damage the surface while handling the roll (do not roll the material face in, until taking it into the room for installation). Before installation, we recommend that the cushioned floor is laid flat and left for 2 hours at a room temperature of +18°C. If it is not possible to do this then the flooring should be loosely rolled and left in the room where it is to be installed for at least 24 hours. This will make the floor more flexible and easier to handle.

**If you wish to receive our installation guidelines in German, French or Dutch, please check our website. www.beauflor.com**
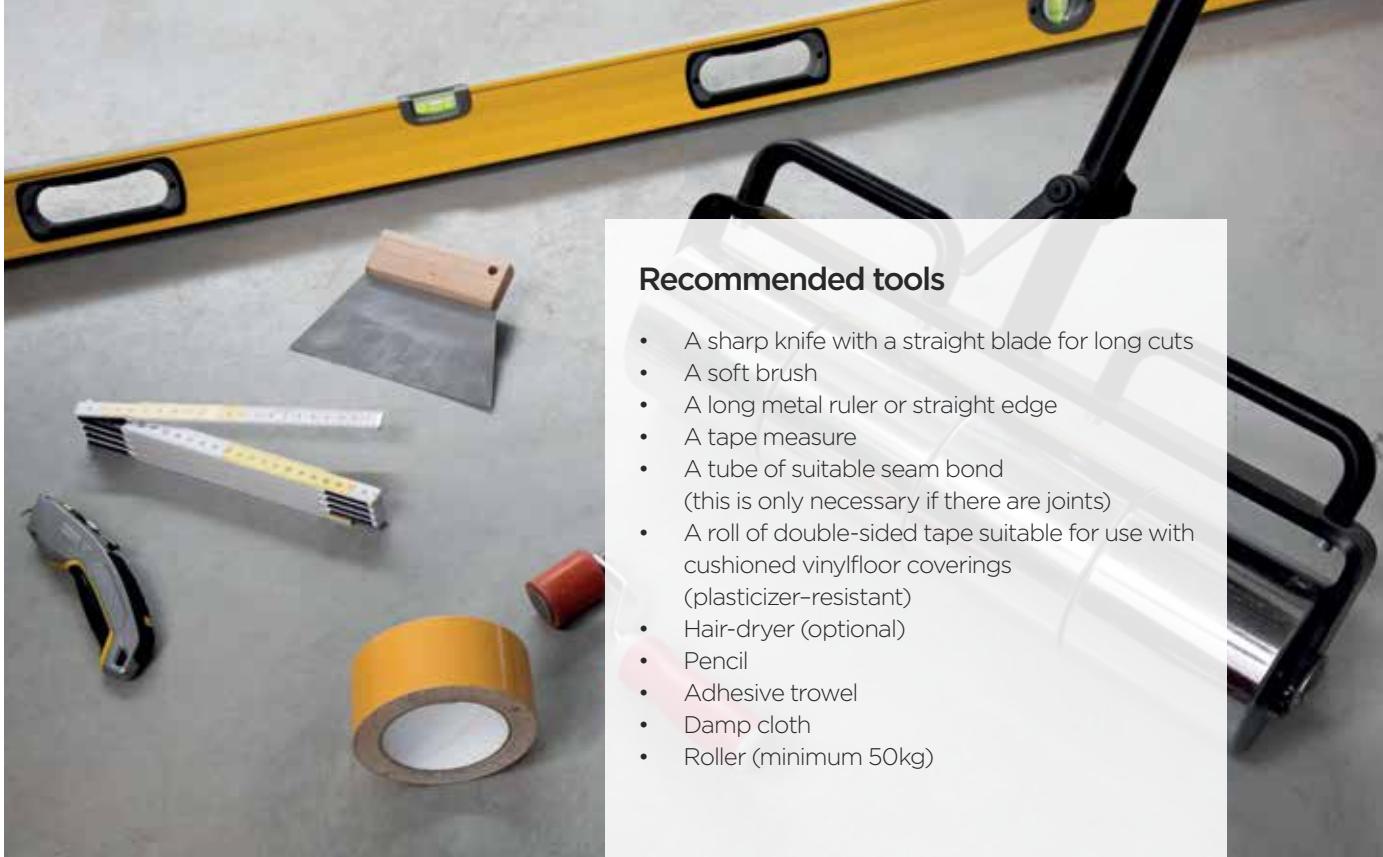

### Recommended tools

- A sharp knife with a straight blade for long cuts
- A soft brush
- A long metal ruler or straight edge
- A tape measure
- A tube of suitable seam bond
  (this is only necessary if there are joints)
- A roll of double-sided tape suitable for use with cushioned vinylfloor coverings
  (plasticizer–resistant)
- Hair-dryer (optional)
- Pencil
- Adhesive trowel
- Damp cloth
- Roller (minimum 50kg)

# 2. SUBFLOOR

## Underfloor heating

All Beauflor floorcoverings are suitable for use over underfloor heating systems, providing the heating system has been installed properly. The heating system should have an automatic cut-off to ensure that the temperature never exceeds 27°C. This applies to both heated water systems and electrical systems.

Ensure that the underfloor heating is working correctly prior to fitting the floor covering. The underfloor heating must be switched off for 48 hours prior to and 48 hours after the installation of the vinyl flooring. During this period an alternative form of heating should be provided to maintain a room temperature of 18°C - 30°C. After installation, the temperature of the underfloor heating should be raised gradually, in increments of 5°C per day, until the desired level.

## Conditions

Subfloors must be absolutely level, clean and free from grit, dust, grease, oil, polish & old adhesive. Solvent-based products, petroleum, pigmented materials on or in the subfloor can permanently stain vinyl floor covering, that's why the subfloor must be free from paint, varnish, oils, solvents, wax, hardening compounds in mastic, asphalt and other similar materials.

Imperfections in the subfloor will affect the final appearance and performance of cushioned flooring. Any particles that could compromise the quality of bonding with the adhesive must be removed.

It is essential that the subfloor is dry. Dampness can cause discolouration to the flooring. The humidity of the subfloor must meet the standard technical requirements valid in the country where the flooring is to be installed.
If in doubt, take a hygrometer reading to check the level of dampness. A maximum hygrometer reading of 75% RH is recommended.

# 3. INSTALLATION

## Fitting your floor

1. Rough cut the material to size leaving about 5cm all round for final trimming in. If more than one piece of flooring is needed, cut the pieces to length but add an amount equal to the pattern match to each piece, plus the 5cm trimming allowance.

2. Line up the cut piece to your selected starting wall. The material is laid with the 5cmover-cut running up the walls, ensuring that the pattern runs parallel to the wall.

3. It is important to cut the floor in gradually. Several small trimming cuts are better than attempting one cut and will result in a better finish. Always hold the knife perpendicular to the floor to keep a straight cut finish.

4. With the material now lying flat around the fittings and corners, the final cutting along the wall lengths can be carried out. Push the flooring into the joint between the wall and floor with a straight edge and cut off small strips at a time, gradually working the material down to the floor keeping the blade tight against the skirting board and held as near the vertical position as possible.

5. Avoid trimming in too tightly as this will prevent the material lying flat (as a general rule leave a gap of 2 - 3mm between the edge of the floor and the skirting board to allow for normal movement, this will avoid any buckling due to room expansion/contraction).

6. Release any trapped air by sweeping with a soft broom.

7. To allow for the movement of heavy appliances (fridges/ washing machines/cookers) it is important to fully adhere the vinyl to the floor in the area behind where the appliance will stand. This band should be at least 5cm deep and run beyond the full width of the appliance, where the floor meets the wall. This minimizes the risk of pulling up the flooring during movement. If heavy appliances are to be regularly moved placing them on an off cut of vinyl or on a piece of hardboard should be considered. This will further reduce the risk of damage to the flooring.

## 3. INSTALLATION Continued . . .

### Seam cutting

### Additional items required:

- Low-tack masking or clear adhesive tape.
- Acrylic adhesive and fine notched trowel or a double-sided adhesive tape suitable for vinyl flooring.
- Chemical vinyl seam bond (Cold welding fluid Type A).

### Follow these steps:

1. Fit the largest of the rough-cut pieces in accordance with above guidelines.
2. Lay the next largest rough-cut piece so that it overlaps the first by 35-50mm, ensuring  that the pattern matches (4m width only): adjacent sheet widths should be reversed to  minimize any variations in the shade which may become apparent.
3. Fit as above.
4. To cut the seam place your steel rule or straight edge so that the guiding edge lies over both edges of the overlapping material. Hold firmly and cut through both thicknesses simultaneously keeping the knife as vertical as possible to the flooring to create a closely butting seam (This will require gradual cutting - do not attempt to accomplish in one stroke.)

### Adhering vinyl to subfloor

Generally, installations requiring only one sheet of flooring material, which is less than 20m² do not require full adhesion. Installations over 20m² are better fully adhered especially if they involve more than one piece of flooring.

The maximum room size for loose laying Beauflor flooring is 20m for PVC backed products; for Tex Bac products loose lay up to 45m. Please rever to the table below for loose lay guidelines. Beauflor does not recommend any loose laying of Flextreme products! (Pietro/Supreme).

### Adhering vinyl to subfloor Perimeter adhesion

We do not recommend perimeter adhesion of Beauflor Vinyl floor coverings. However double-sided tape (suitable for resilient residential vinyl) can be used in doorways to ensure the vinyl lies flat. Alternatively the floor can be held in place under a suitable threshold strip.

### Full adhesion

Installations requiring full adhesion are best carried out by a professional installer. However, as a general guideline :  After applying a suitable adhesive in accordance with the manufacturer's instructions, allow the adhesive to cure until it reaches its initial bonding strength, before putting the floor covering in place. Ensure that the sheet is flat, smoothing out bubbles, compressions and tensions. Check that the seams are joined tightly together. Do not try to compress seams that are curling. If the sheets are curling it is an indication that the sheets are not joined together correctly.

### Additional tools/items needed:

- An acrylic flooring adhesive (rubber/neoprene adhesives must not be used)
- A fine notched spreader
- An old blanket

### Single piece installation

After fitting, turn back the flooring to expose about half of the subfloor. Apply the adhesive to the subfloor in accordance with the adhesive manufacturer's instructions. Replace the flooring material slowly and carefully over the prepared subfloor without trapping air bubbles. Turn back the other half and follow the same procedure. Roll the flooring with a 50kg flooring roller to push out any trapped air bubbles.

| Collection | Subfloor preparation | Loose lay**<br>(witout glue or adhesive) | Semi loose lay***<br>(with double-sided adhesive<br>or velcro at the periphery of<br>the part and at the joint) |
|---|---|---|---|
| **Puretex** | Minimal subfloor preparation | < 45 m² | > 45 m² |
| **Hightex** | Minimal subfloor preparation | < 45 m² | > 45 m² |
| **Nobletex** | Minimal subfloor preparation | < 45 m² | > 45 m² |
| **Ultratex** | Minimal subfloor preparation | < 45 m² | > 45 m² |
| **Supreme** | Minimal subfloor preparation | < 35 m² | > 35 m² |
| **Designer-Tex** | Minimal subfloor preparation | < 35 m² | > 35 m² |
| **Blacktex** | Minimal subfloor preparation | < 35 m² | > 35 m² |
| **Soho** | Minimal subfloor preparation | < 35 m² | > 35 m² |

| **Smartex** | With limited subfloor preparation | < 25 m² | > 25 m² |
| **Silvertex** | With limited subfloor preparation | < 25 m² | > 25 m² |

## Two piece installation

1. Where more than one piece is being fully adhered, complete fitting as described above and pattern-match both pieces, but do not cut the seam. Refer to the section - "Pattern-matching, seam cutting" before you begin
2. Carefully fold back the flooring and put down a piece of double-sided tape on the floor directly under the middle of the seam. Alternatively apply a 15cm/6" band of acrylic adhesive to the floor directly under the seam.
3. Carefully replace the flooring onto the tape or into the adhesive making sure that the pattern match is correct.
4. Cover the seam with a low-tack masking or clear adhesive tape (do not use a strong adhesive tape as this may damage the floor surface when you remove it).
5. Cut through the tape along the seam so it is ready to take a cold-welding vinyl sealant fluid. Allow 24 hours after adhesion of the floor before finishing the joint. (Refer to the section "welding")
6. Fold back the material from the side walls parallel to the seam, exposing about half the subfloor under each piece.
7. Spread the adhesive in accordance with the manufacturer's instructions, replace the material over the prepared subfloor.
8. Allow the recommended drying time and then carefully reposition the material.
9. Roll the flooring with a 50 kg flooring roller to push out any trapped air bubbles. Take care not to force adhesive up into the seam. For Flextreme / Tex Bac products: Press the material onto the adhesive with a broom wrapped in a blanket, taking care not to force adhesive up into the seam.

## Welding

Cold welding is used in low-traffic and residential areas, and can be started 24 hours after the installation of vinyl sheet flooring. Seam welding should only be undertaken after the drying process is complete, this will take a minimum of 24 hours.

1. Cover the seam between two sheets of vinyl flooring with lightly removable adhesive tape to prevent the sealant fluid from sticking to the surface of the vinyl flooring.
2. Using a sharp blade (e.g., a utility knife), cut through the tape along the seam
3. Insert the applicator needle well into the seam until it touches the subfloor. Pull it slowly along the seam whilst gently squeezing the tube (follow the instructions of the seam bond manufacturer).
4. The needle will allow fluid to flow into the seam and, at the same time, a bead of fluid about 2-4mm wide will be left on the tape.
5. After approximately 10 minutes, the sealant starts drying and the adhesive tape can be removed.

The seam will be dry enough to walk on after 20 minutes and fully cured in 2-3 hours, by which time it will be a watertight, dirt-resistant seam. With time, as a consequence of cleaning and normal wear, the joint between two sheets of vinyl flooring disappears.

## 4. After Maintenance

Once the installation is complete we recommend that you allow at least twenty-four hours drying time before moving heavy objects back into place.
Keep traffic to a minimum during the first 48 hours, to allow the adhesive to harden at consistent temperatures between 18 – 29°C.

Furniture should not be placed on the floor until the adhesive has had adequate time to dry (at least 24 hours/after 72 hours). Always move heavy furniture and appliances with care to avoid gouging or tearing the floor. First, lay strips of plywood or hardboard panels on the floor. Then roll, «walk» or slide these items on the strips. Make sure furniture legs have non-staining floor protectors. Replace small, narrow metal or dome-shaped glides with smooth, flat glides that are in flat contact with the floor. Glides should be equipped with self-adhesive felt pads to avoid scratching the surface of the floor.

The pads should be checked periodically for grit and wear and replaced when necessary. Always place mats at outside entrances to prevent dirt, grit and soil from being tracked onto your floor.

## Do not use:

• Rubber-backed mats or other rubber objects as they may permanently stain your floor.
• Heat-producing appliances (refrigerators, hot air emitting devices...) or cigarettes and matches can scorch, burn or discolour your floor.
• Spiked heels on floor coverings, they can leave permanent damage.
• When overexposed to the sun, vinyl flooring may discolour or fade, it should be protected from strong sunlight by drawing curtains or blinds.

Prevent the floor from coming into contact with water for the first 72 hours after installation, or until such time as all seams are welded. Hereafter the adhesive is sufficiently resistant to water so that the bonding strength will not be affected. During the service life of the floor, the temperature should never fall below 13°C. The performance of the flooring material and adhesives can be adversely affected below this minimum temperature.

# 5. General maintenance

The amount of daily usage will determine how often cleaning is required. Sweep as necessary with a soft broom. Care must be taken if you use a vacuum cleaner, do not use vacuum cleaners with "beater bars". Wipe over with a clean damp mop or cloth, which should be rinsed frequently in clean water. CAUTION: Remember that all floors can be slippery when wet.

When necessary wash with a solution of clean water and mild detergent or domestic floor cleaning emulsion. Rinse thoroughly and soak up residual water. For additional lustre buff with a dry cloth. Spots, marks and spillages should be wiped up as soon as possible.

## Do not use:

•    Wire or nylon wool scouring pads
•    Furniture polish
•    Spirit based polish
•    Powder or liquid abrasive cleaners
•    Bleach or strong detergents

Always follow the manufacturer's instructions Check that the cleaner/polish is suitable for use with cushioned vinyl floor coverings.

## Periodic maintenance

The floor should be cleaned periodically by using a floor machine equipped with a scrubbing brush, wet vacuuming or dry buffing.
Vinyl floors with a protective PU lacquer do not normally require polish. Other floors will require polishing to protect the floor's surface from staining agents and to give a surface shine. For such floors apply a liquid emulsion -floor polish after installation and thereafter at 6 – 12 monthly intervals as required. Always follow the manufacturer's instructions when using a floor polish or cleaner. To avoid build-up, it is important to remove the previous layer of polish prior to re-polishing. The old polish can be removed by using an appropriate stripping solution and a wet/dry vacuum cleaner. Once the new polish has been applied, buff to a gloss finish using a dry buffing machine.

## Maintenance in case of stubborn stains

In the case of extremely stubborn stains, such as acids, alkalis, shoe-polish, blood, mustard, food, candy, fruit and fruit juices, grass, urine, excrement, vomit etc, Beauflor recommends using a suitable cloth or a towel soaked with a neutral floor cleaner and water, or a cloth soaked with methylated spirit  (Note : this process is not suitable for Safety flooring).

For stains which won't wipe up easily, such as chewing gum, iodine, wax, oil, asphalt, tar etc. the sooner you act the better. Carefully remove the excess with a dull kitchen knife, then rub the area lightly with mineral spirits, isopropyl alcohol or lighter fluid. Repeat as necessary until the stain has been removed.

After removing any stubborn stains always rinse well with clean water.

## Protecting your floor from physical damage

## Avoid the following:

•    Rubber backing on doormats may result in yellow discolouration of the floor immediately beneath. Choose a natural fibre mat in preference.
•    Rubber feet on furniture may cause staining. Re move them altogether or replace with coasters or felt pads between them and the floor.
•    Spirit-based products such as shoe polish, solvents, hair dye and permanent marker pens. Wipe up spots and marks as quickly as possible. Also applies to turmeric, mustard and strongly coloured foodstuffs.
•    Corrosive substances such as acid and alkaline solutions can damage the surface of the floor, clean up any spills quickly and carefully avoiding direct with the substance. Wear protective clothing (gloves etc. when doing so).
•    Bitumen/tar from freshly resurfaced or melted roads and pathways. Some inexpensive rubber shoe (and slipper) soles can also cause stains.

The above list is indicative of materials likely to cause damage but is not to be considered definitive.

Beauflor has the right flooring for all domestic
and public spaces. Beauflor offers a very wide choice
of features and designs. Discover the full range at:
